

## PYTON IS SEEKING AN INNOVATIVE & EXPERIENCED BACK-END DEVELOPER

Are you ready to innovate new & existing products and incubate new business with dedicated development resources and great sales teams to ensure new business breakthroughs?

### What you tell your friends on a party:

Have you ever booked your travel online? Well, I am the one that makes it possible for you to quickly book the best rated flights & packages! Together with my team, I am working on software projects critical to the needs of our organization and customers. We translate customer needs into a robust architectural design while following code guidelines & together with my cool peers, I ensure quality through unit tests and peer reviews of code & incorporate identified improvements and actively participate in the building of the platform by constantly looking for improvement.

### What you actually do:

Let's start with a good cup of coffee and chat with your colleagues about the weekend & the ideas you have about building an efficient team committed to innovation. At 10 AM you'll have your daily standup, because we work according to Scrum/Agile methodology. You design, implement and maintain highly visible and user facing features and projects & design and develop large-scale distributed services. Reviewing user stories and translate this to customer needs by identifying existing and new functionalities is very common to you. We adhere strictly to code guidelines, ensure code supports architectural design and writing codes according to solid guidelines. You perform unit tests of code and revise codes as required. We continuously integrate re-useable components.

### Your profile:

- Bachelor degree in Computer Science or equivalent practical experience
- Programming skills in C#, SQL, JSON, XML, elastic search, NOSQL data bases is preferred
- Capable of technical deep-dives into code, networking, operating systems and storage
- Strong problem diagnosis skills, ability to optimize the performance of algorithms
- Team player and also have the ability to work on own initiative
- Affinity with new technologies
- Strong competencies in data structures, algorithms and software design
- Experience adhering to Microsoft Design Patterns
- Experience with SCRUM methodologies of development
- Experience in API web services

### We offer:

- Competitive remuneration package
- 25 holidays (if you promise to return)
- a dynamic, entrepreneurial & international environment
- nice, helpful and talented colleagues
- space to share your new, innovative ideas
- a vibrant work location

Please be invited to contact Charleen Visser, People & Culture advisor, for more information about the role: +31 6 21641084 or [c.visser@pyton.travel](mailto:c.visser@pyton.travel)

We are looking forward to your application! #Let's shape the future of travel
