PYTON IS SEEKING A QUALIFIED & EXPERIENCED SOFTWARE TEST ENGINEER

What you tell your friends on a party:

Have you ever booked your holiday online? Well, I am the one that makes it possible for you to quickly book the holiday of your dreams!

Together with my team, I am working on leisure projects critical to the needs of our customers and organization. We translate customer needs and build these into a responsible and elegant web- & mobile application. I have a huge impact on the quality of our products and services - Quality is my nickname.

What you actually do:

Let's start with a good cup of coffee and chat with your colleagues about the weekend & the ideas you have about building an efficient team committed to innovation. At 10 AM you'll have your daily standup, because you are working with your team according to Scrum/Agile methodology ((T-shirt sizing, refinement, sprint demo, sprint retrospective and sprint planning). You are responsible for testing the Pyton Leisure Platform software. As member of an agile team you participate in the Pyton Leisure Team. You are capable to work independently and take responsibility for the testing part covering the full test process from test plan to test report. Together with the team you develop a risk-based test approach, execute and report on these tests. In close cooperation with the software developers you develop automated tests that are of high importance within the CI/CD pipeline. You'll have a huge impact on the quality of Pyton's growing suite of products and services. The main tasks are: analysing requirements, determining test approach, writing and developing test plans, implementing automated tests, participating in improving the test automation framework, implementing Web UI tests, executing tests, analysing an report test results, analysing test coverage, reporting and chasing defects.

What we ask:

- At least 3 years software test engineering experience with focus on quality and result
- Certified in TMAP and/ or ISTQB
- Hands-on experience with various test specification techniques
- Experience in functional as well as non-functional testing, test management tools, test automation - concepts (incl. UI automation)
- Programming skills in C#, Python, XML&XSD, HTTP, REST, MICROSOFT SQL (LINUX is preferred)
- Experience and affinity with Configuration Management, Change Management, Requirements Management (CI is preferred)

Who you are:

Authentic, committed and enthusiastic. Being a part of an Agile team is important for you, but you're able to work independently. You have a pragmatic, pro-active and hands-on attitude.

What we offer:

- remuneration, unless you come for free
- 25 holidays (if you promise to return)
- a dynamic, entrepreneurial & international environment
- nice, helpful & talented colleagues
- space to create your new, innovative ideas
- a vibrant work location

We value the relationship with our clients customers deeply. Satisfaction is key and you are one of the key members in our company to ensure we deliver the best, we ensure autonomy to do so.
